EXAMINER'S AMENDMENT

Pending the following examiner's amendment, this allowance is in response to Applicant's amendment filed on 5/10/2010. Applicant amends claims 43, 49, 54, 55, and 56, and previously cancelled claims 1-42 and 50. Accordingly, claims 43-49 and 51-58 are presented for further examination.

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Gero McClellan, Reg. 44, 227 on July 13, 2010.

The application has been amended as follows:

Claim 54. (Currently Amended) A non-transitory computer-readable medium storing computer-executable instructions that when executed by a computer control the computer to perform a method, the method comprising:

maintaining, in the computer, access to a plurality of secondary content addresses, where a secondary content address identifies secondary content located at a secondary content source;

intercepting an initial request for initial content made by a requesting device before the initial request arrives at an intended destination, the intended destination being an initial content source;

extracting at least one request criteria from the intercepted initial request; creating redirection information by processing the at least one request criteria to determine an identity of secondary content to be retrieved by the requesting device, wherein the redirection information includes a first redirection code and a second redirection code; and

transmitting the redirection information and a command to the requesting device without transmitting the secondary content from the computer to the requesting device; wherein receipt of the redirection information by the requesting device controls the requesting device to issue a first request for the secondary content based on the first redirection code and wherein receipt of a command from a source of the secondary content by the requesting device controls the requesting device to issue a second request for the initial content based on the second redirection code, wherein the receipt of the command occurs subsequent to issuing the first request.

Claim 55. (Currently Amended) A method performed in an intercepting communications device, the method comprising:

maintaining, in the intercepting communications device, access to a plurality of secondary content addresses, where a secondary content address identifies secondary content located at a secondary content source;

intercepting an initial request for initial content made by a requesting device before the initial request arrives at an intended destination, the intended destination being an initial content source;

extracting at least one request criteria from the intercepted initial request; creating redirection information by processing the at least one request criteria to determine an identity of secondary content to be retrieved by the requesting device, where creating redirection information comprises:

concatenating together a first redirection code and at least one second redirection code, where the first redirection code instructs the requesting device to issue a first request for the secondary content, and where receipt of a command from a source of the secondary content by the requesting device controls the requesting device to issue a second request for the initial content based on the second redirection code, wherein the receipt of the command occurs subsequent to issuing the first request; and

separating the first redirection code and the second redirection code by a delimiter;

transmitting the redirection information to the requesting device without transmitting the secondary content from the intercepting communications device to the requesting device, [[:]]
and

~~providing a command to the requesting device, where the command controls the requesting device to concurrently retrieve the initial content and the secondary content based, at least in part, on the redirection information.~~

Allowable Subject Matter

The following is an examiner's statement of reasons for allowance:

Independent claims 43, 54, and 55 are directed to a method and medium for providing content to a user comprising a unique combination of features that is not taught or suggested by the prior art. In particular, the claims recite steps for intercepting an initial request for initial content, extracting at least one request criteria from the intercepted request, creating redirection information by processing the request criteria to determine secondary content to be retrieved where the information includes first and second redirection codes, and then transmitting the redirection information and a command to the requesting device without transmitting the secondary content.

Importantly, the redirection information controls the requesting device to issue a first request for secondary content based on the first code and the requesting device receives another command from a source of the secondary content which controls device to issue a second request for the initial content based on the second redirection code. The prior art does not teach or suggest these combination of features.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
